Key Points

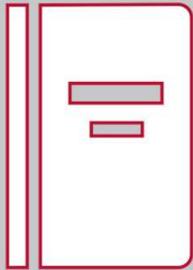

- Your equipment specifications team is working for you.
- If something needs to be measured, we're going to measure it.
- You can be confident we have followed our process and our results are accurate and precise.

What We Do

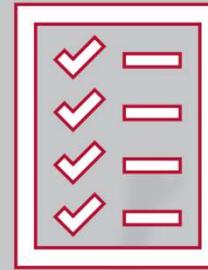

USBC Promise

Our promise is to celebrate the past, be mindful of the present and ensure bowling's future through thoughtful research, planning and delivery.

Process Enhancements

- Ball Temp
- Sanding Method
- Mineral Oils
- Time

Approval Samples

- 500+ balls

Performance Testing

- BowlScore
- EARL
- League Simulations
- Specto

Data Analysis

- 6 fastest
- # drops/color
- Drops @ 1 time
- Microscope vs. DVR

Measurement System Analysis (MSA)

- We analyze measurement systems for **Accuracy** and **Precision**
- USBC uses Gage R&R as our main MSA method.
- R&R Stands for **Repeatability** and **Reproducibility**.

Accuracy & Precision

- Accuracy – Measurements are on target.
- Precision – Measurements are consistent.

Precise and Accurate

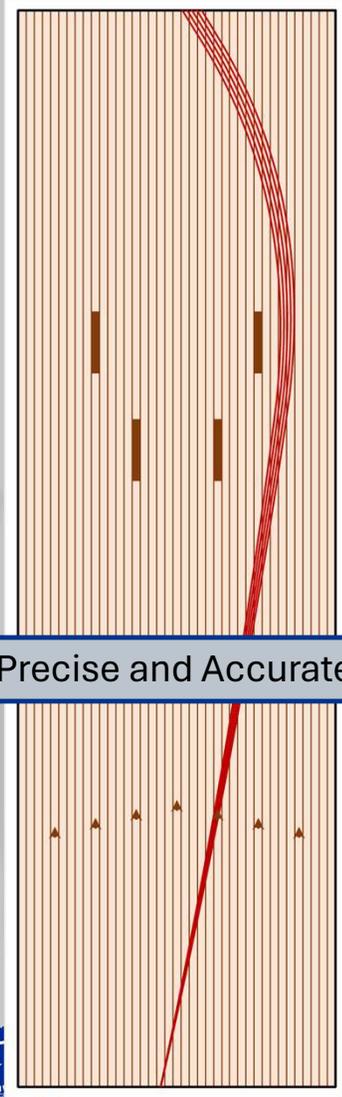

Accurate, not precise

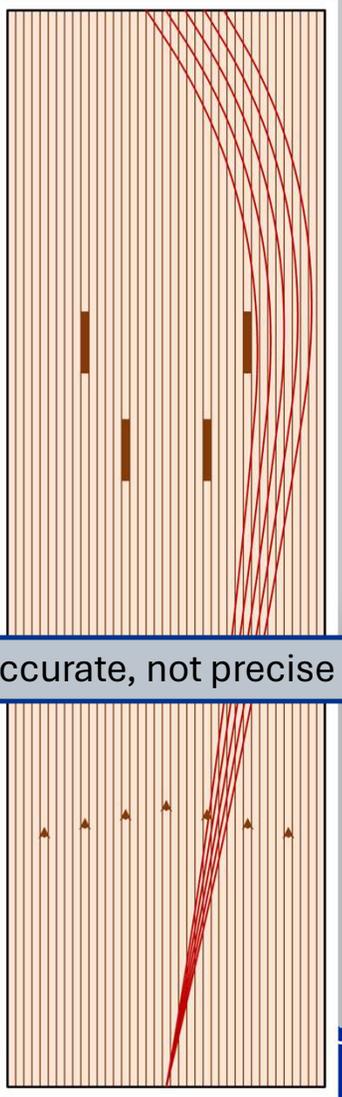

Precise, not accurate

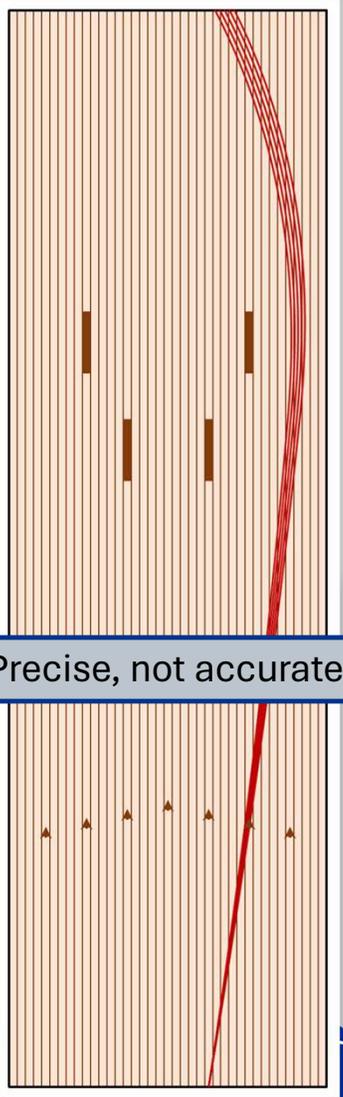

Not precise, not accurate

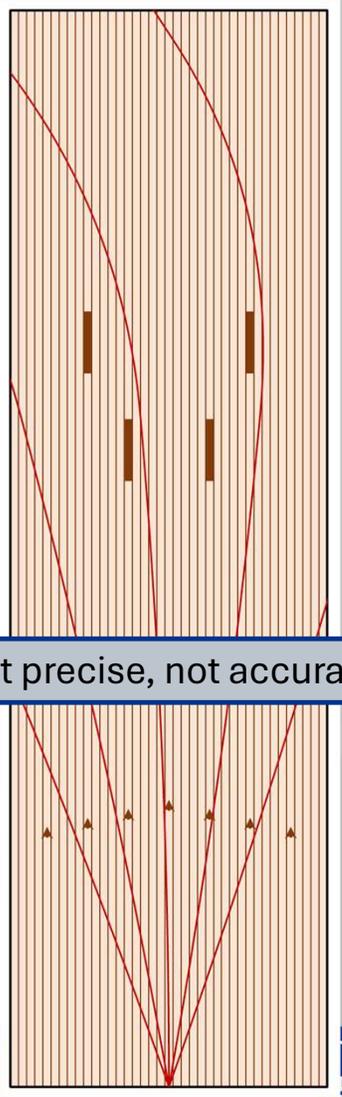

Precise and Accurate

Accurate, not precise

Precise, not accurate

Not precise, not accurate

Repeatability

- Ability for one user to ***repeat*** their results.
- Think...
 - Bowling a 300
 - Getting a hole in one on 18 holes in a row
 - One person, doing the same thing, getting the same result.

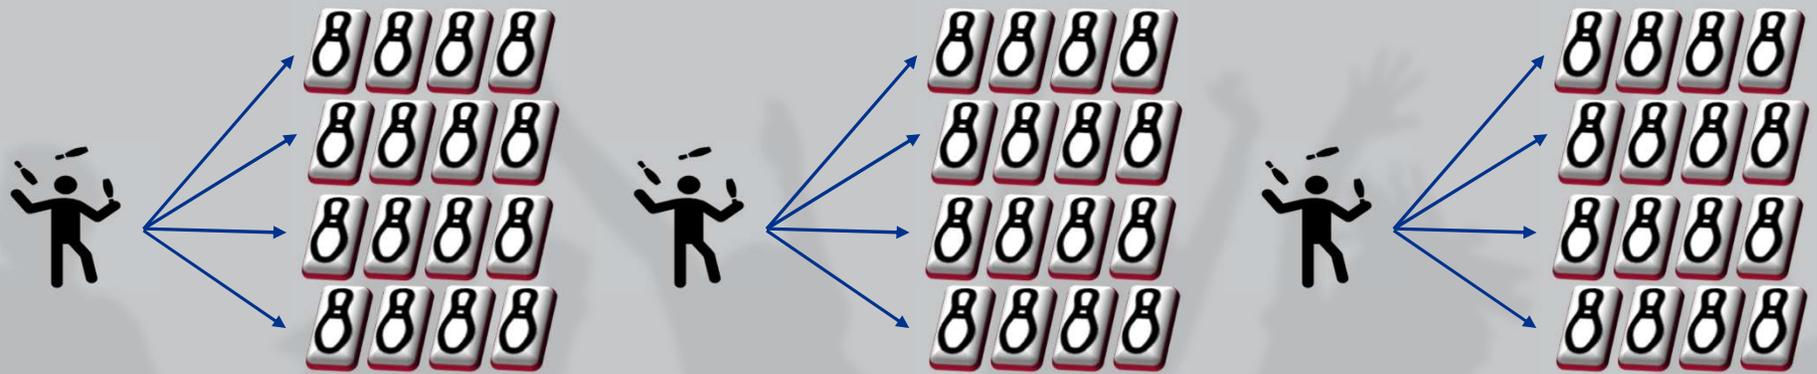

Reproducibility

- Ability for others to **reproduce** your results.
- Think...
 - Everyone on the pair throwing a strike in the same frame
 - Everyone playing darts all getting a bulls-eye
 - Multiple people, trying the same thing, getting the same results.

Gage R&R Design

Oil Absorption

Sample Size: Operators x Parts x Trials \geq 40

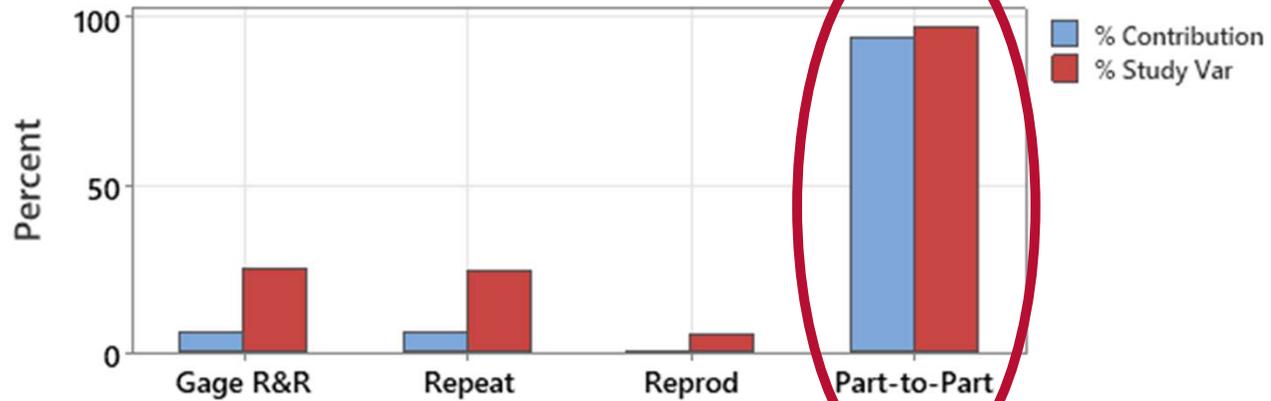

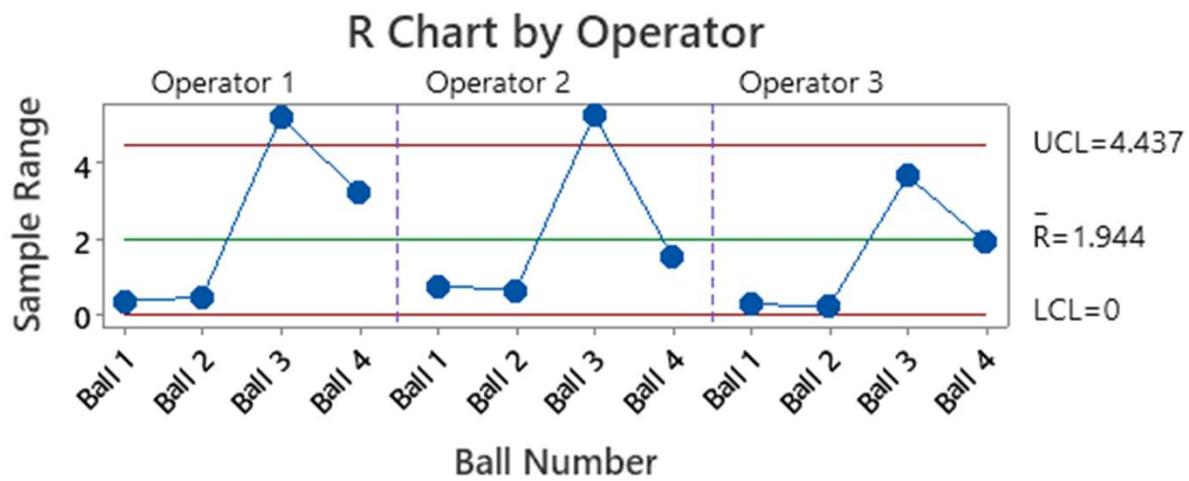

Appropriate range of values across parts

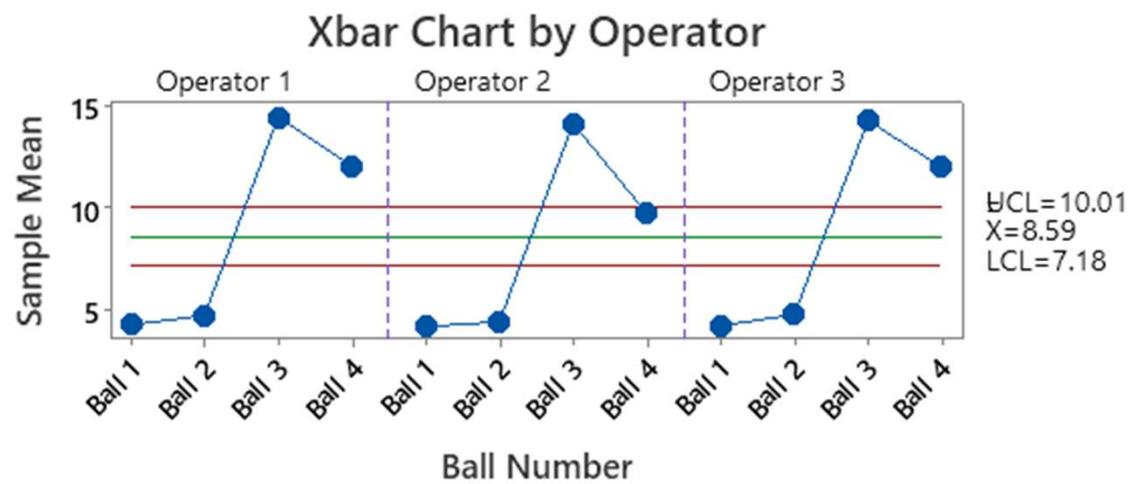

- 3 Manufacturers

- Range of Expected Times

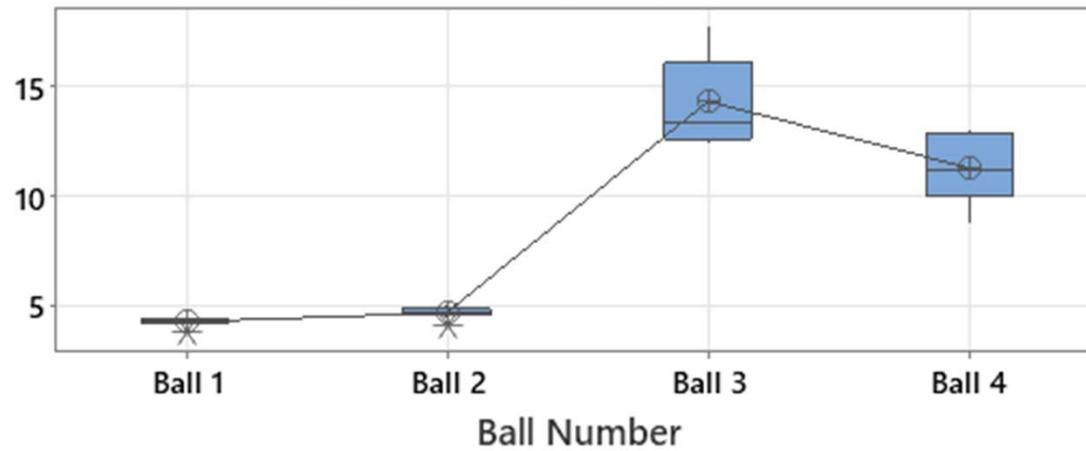

Components of Variation

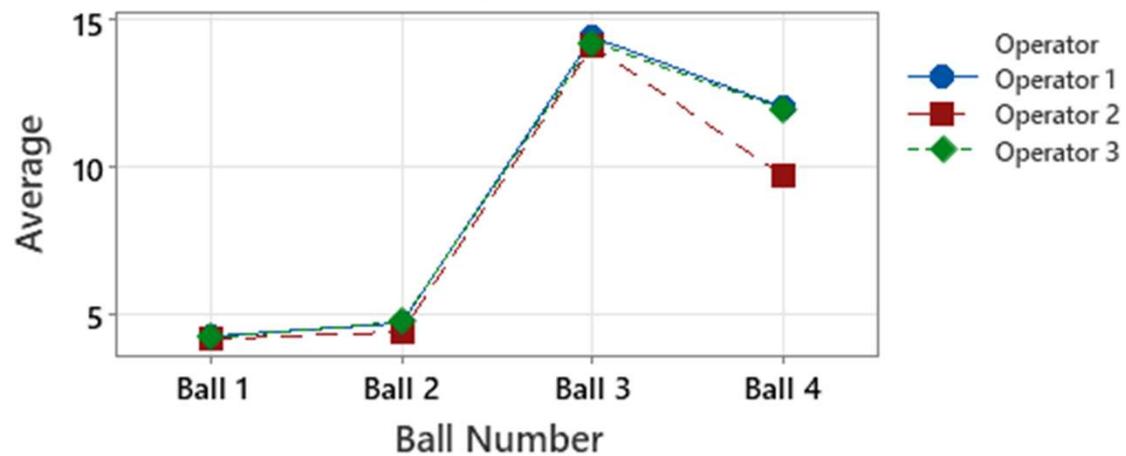

Average of 3 Drops by Ball Number

Ball Number * Operator Interaction

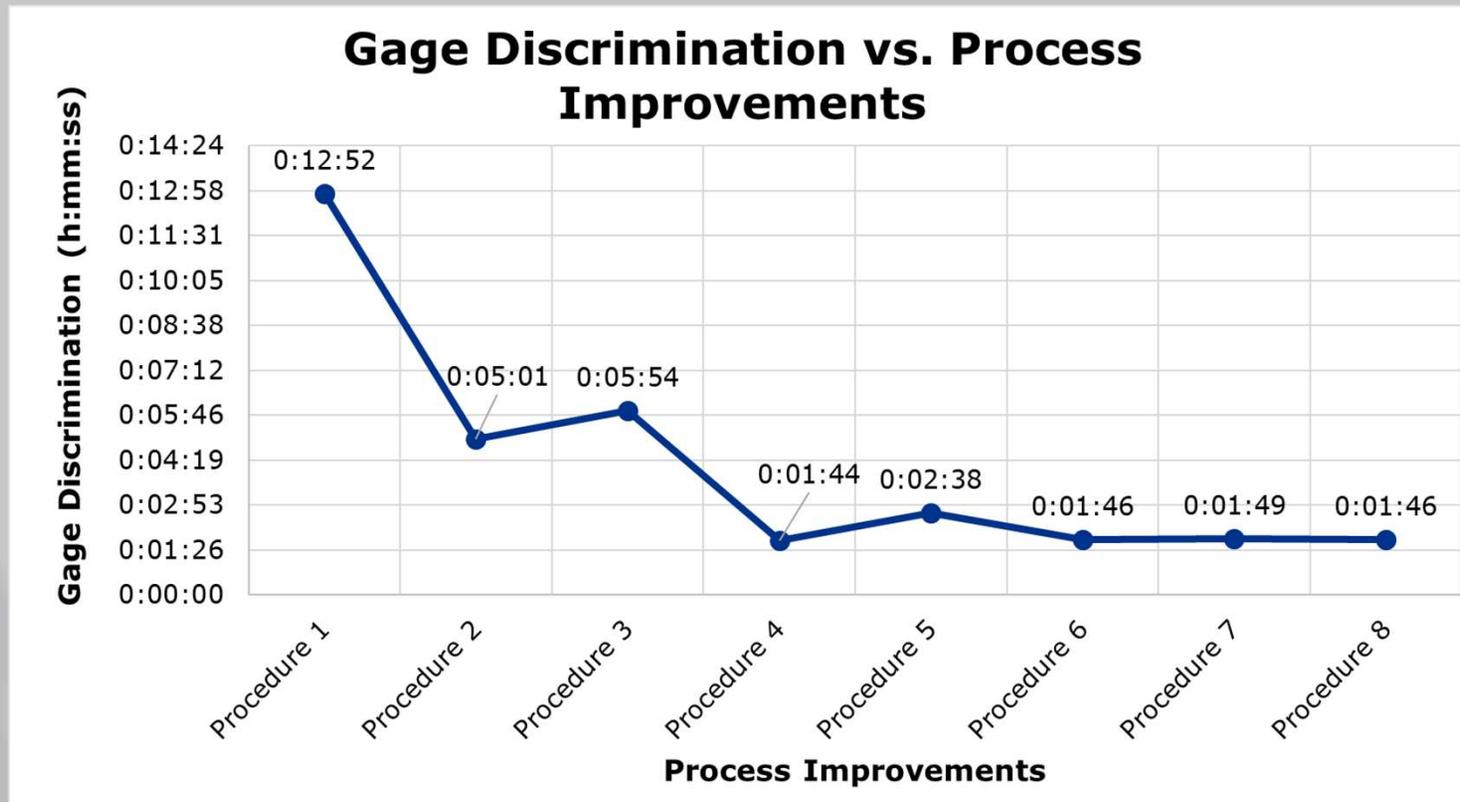

Gage R&R Output Values

Gage Evaluation			
Source	StdDev (SD)	Study Var (6 × SD)	%Study Var (%SV)
Total Gage R&R	1.27818	7.6691	25.44
Repeatability	1.24689	7.4813	24.44
Reproducibility	0.28107	1.6864	5.51
Operator	0.28107	1.6864	5.51
Part-To-Part	4.93936	29.6362	95.87
Total Variation	5.10206	30.6124	100.00

Gage Discrimination
Data Range
 # Distinct Categories = 5
 1.775 minutes
 (1 minute, 46 seconds)

Number of Distinct Categories = 5

Gage R&R at Different Phases

Why measure footprint?

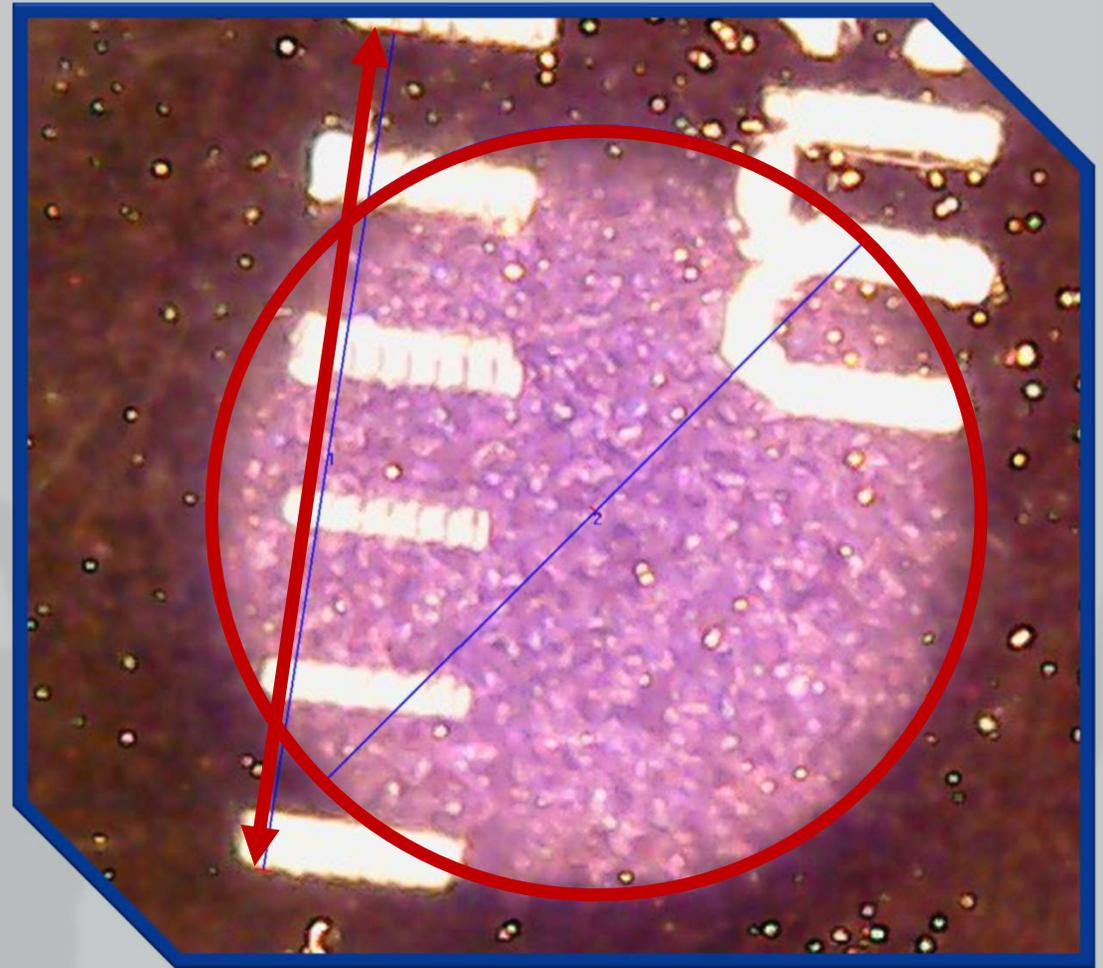

- Bowling ball hardness was first implemented in the 1970's to control "track width" due to players tampering with their equipment.
- Modern technology allowed us to measure the footprint
- Measuring footprint increased our understanding and supported earlier hardness research

Example Image of Footprint

We measure the measurement scale, to ensure **accuracy**.

We measure the diameter of the circle as the result.

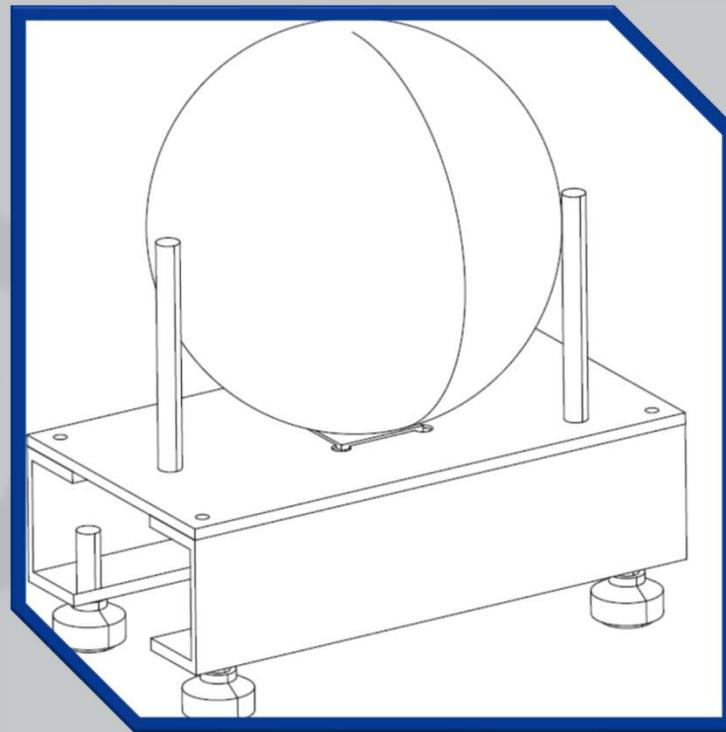

We measure ten images per ball and average the results.

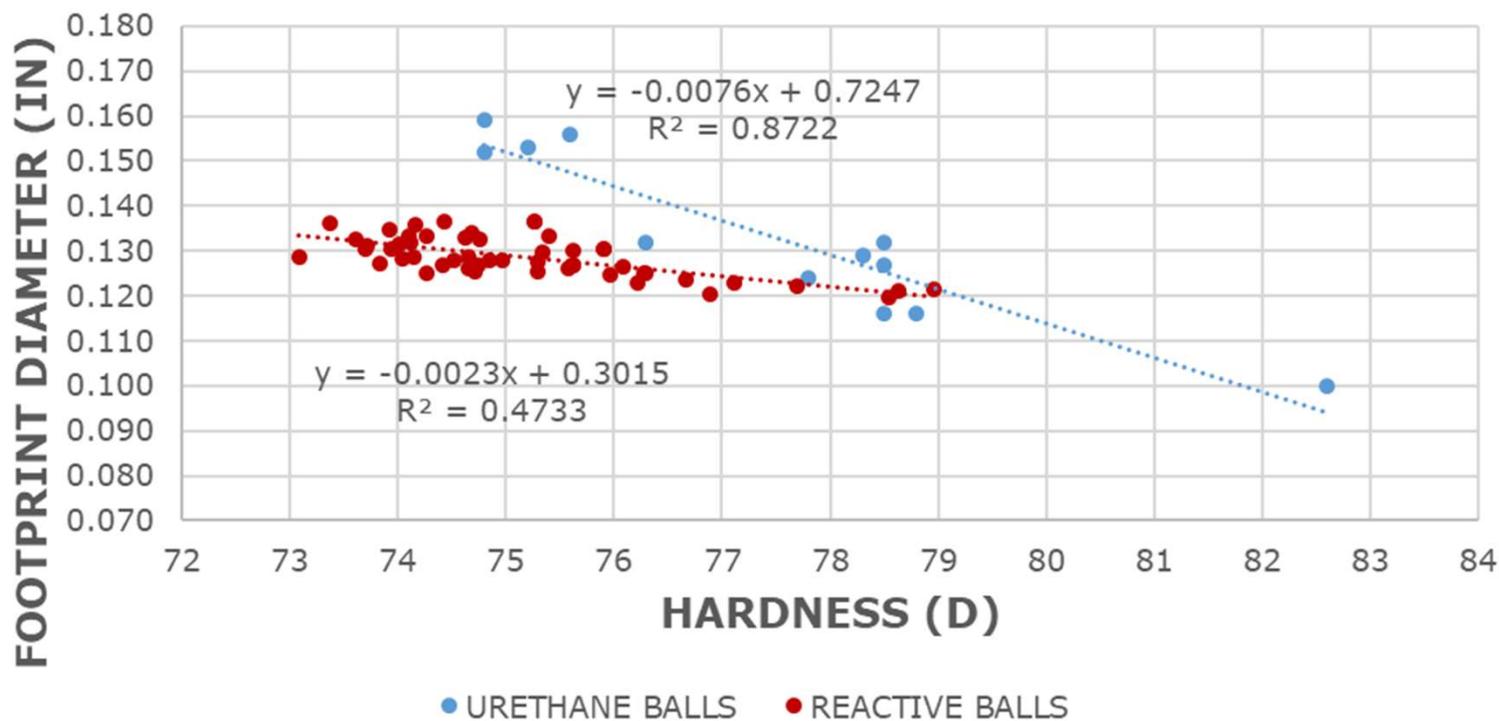

Outcomes of Footprint Research

- Supported findings from hardness research
- Produced a **repeatable** and **reproducible** research tool
 - Results independent of operator
 - Gauge Discrimination of 0.004"
- Following our Vision:
 - ...to continue to be the leading authority to the sport, servicing the needs of bowling.

Footprint Demonstration

FOOTPRINT VS. HARDNESS (D) BY MATERIAL

Closing Thoughts

- Your equipment specifications team is working for you.
- If something needs to be measured, we're going to measure it.
- You can be confident we have followed our process and our results are accurate and precise.

Closing Thoughts

USBC Promise

Our promise is to celebrate the past, be mindful of the present and ensure bowling's future through thoughtful research, planning and delivery.
