# UNDERSTANDING THE BALL GUIDE RATINGS

**BJI BALL REVIEWER** Vernon Peterson provides hook, length and breakpoint ratings for each ball reviewed throughout the year. All of that data for balls released during 2014 can be found in *BJI's* 31st annual Ball Guide. Here is an explanation of numeric ratings:

## HOOK RATINGS

**35-45:** Balls with lower total hook ranges, best suited for lighter oil concentrations. Players with slower speeds or higher rev rates may also prefer balls in this range for medium oil applications.

**45-51:** Balls with medium hook ability, best suited for the vast majority of "typical house shots" and some lower-volume Sport patterns. This hook range should be represented by the "centerpiece" ball in most arsenals.

**51-60+:** Balls with greater total hook, designed for heavier oil volumes. Players with higher speeds or lower rev rates, who need added lane traction, may also prefer balls in this range.

## LENGTH RATINGS

**8-12:** Earlier rolling balls that read the lane sooner. These products generally come factory-sanded with lower grit surfaces, and match up well for speed-dominant styles and those bowling on longer oil patterns.

**12-15:** Medium-length balls that produce easier length through the midlane. Good for most house shots and medium-volume Sport patterns.

**15-19+:** Balls offering extra length for those bowling on lighter oil concentrations. Also beneficial for slower speed players, or those with higher rev rates needing added push downlane.

## BREAKPOINT RATINGS

**10-13:** Slower-response balls that read the friction areas more gradually. This range may include balls with a urethane or mild reactive cover, designed for a smooth arc to the pocket. Also can help those with higher rev rates control motion and match up well from outside angles of attack.

**13-15:** Balls rated for slightly stronger and quicker reactions when encountering friction areas (as when the ball leaves the oil pattern). This range offers a balance of control and back-end angularity.

**15-18+:** Balls that respond more quickly and aggressively to friction areas. This range can help those with less hand action create more angularity near the pocket. Also preferred when playing deeper inside angles, which generally require more entry angle for above-average pin carry.

## ABOUT THE BJI 31ST ANNUAL BOWLING BALL GUIDE

**FOR THREE DECADES**, *Bowlers Journal International* has been reviewing bowling balls, helping readers select the equipment that best matches their game and the lane conditions they normally encounter.

On the pages that follow, you'll find summaries of all balls reviewed by "No Holes Barred" columnist and reviewer Vernon Peterson during 2014. Included is a short "snapshot" of each review. However, we highly recommend reading the full reviews in order to gain a clearer understanding of the balls, their capabilities and their recommended uses. To that end, each capsule review includes the month of the original review.

At the end of this section, you'll find contact information for bowling ball manufacturers. Company websites may provide additional useful information.
